+91-9325237641 | roypankaj2060@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Kaggle](#)

PROFESSIONAL SUMMARY

Final-year B.Tech AIML student at Symbiosis Institute of Technology (NAAC A++) with full-stack Python backend engineering experience — shipping real database-backed systems with REST APIs, clean modular architecture, parameterised SQL, and GitHub-versioned documentation. Comfortable forking codebases, raising targeted pull requests, acting on review feedback, and writing well-tested, documented code independently. Active on LeetCode (100+ problems) and open-source platforms with a public commit history.

EDUCATION

Symbiosis Institute of Technology (SIT), Pune — NAAC A++

Expected: May 2027

B.Tech — Artificial Intelligence & Machine Learning | Symbiosis International (Deemed University)

- Coursework: Data Structures & Algorithms, OOP, DBMS, Computer Networks, OS, Software Engineering, Python, Machine Learning

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, TypeScript (familiar), JavaScript (basic)

Backend & APIs: REST APIs, HTTP, JSON, CRUD, JWT Authentication, PyMySQL, JDBC, Parameterised Queries

Databases: MySQL, MongoDB / Atlas, PostgreSQL (basic) — schema design, normalisation, joins, indexing

Dev Tools: Git, GitHub (fork, branch, PR, code review), VS Code, Postman (basic), Docker (familiar), XAMPP

Libraries & ML: Pandas, NumPy, Scikit-learn, TensorFlow, OpenCV, Matplotlib, Seaborn, Plotly, Feature Engineering

Core CS: OOP, DSA, DBMS, OS, Networks, Software Engineering, Debugging, Testing, Agile, Documentation

SOFTWARE ENGINEERING PROJECTS

Smart Digital Banking System | *Python, Flask, MySQL, REST APIs, JWT, HTML/CSS/JS* | [GitHub](#)

2025

- Engineered a full-stack digital banking platform with a Python Flask backend exposing RESTful endpoints for account creation, fund transfers, transaction history, and balance queries — returning structured JSON with appropriate HTTP status codes and error handling
- Designed a 4-table normalised MySQL schema (Users, Accounts, Transactions, Audit) with foreign key constraints, indexed columns, and exclusively parameterised queries — preventing SQL injection and ensuring atomic multi-step transaction commits
- Implemented JWT-based stateless authentication with role-based access control for customer vs. admin routes; validated all edge cases including duplicate accounts, overdraft prevention, and concurrent transfer conflicts [verify coverage against test suite]
- Structured codebase with clean module separation (routes/models/services/utils), documented README with local setup guide and API reference, and feature-branch Git workflow — ready for open-source contribution and independent code review

Payroll & Financial Records Management System | *Python, MySQL, PyMySQL, Tkinter, CRUD, Authentication* | [GitHub](#)

2024

- Built a production-grade Python backend system automating payroll computation, attendance tracking, and employee record management — designed as a normalised 3-table MySQL schema (Employees, Attendance, Payroll) with enforced referential integrity and compound indexes
- Implemented all CRUD operations via PyMySQL with parameterised queries exclusively; engineered an automated payroll engine cross-referencing attendance records against salary tiers to compute net disbursement with zero manual arithmetic
- Versioned full codebase on GitHub with modular file structure, documented README (DB config, XAMPP setup, app launch), and structured commit history — demonstrating clean, reviewable code practices aligned with open-source contribution standards

Vendor Analytics Platform | *Python, Pandas, MySQL, REST API, Plotly, ETL Pipeline* | [GitHub](#)

2025

- Built an end-to-end ETL pipeline ingesting 10,000+ multi-source vendor records into MySQL — performing null imputation, duplicate removal, field normalisation, and aggregation before exposing analytics results via lightweight REST API endpoints returning JSON
- Developed 10+ interactive Plotly dashboards covering vendor KPIs (delivery rate, cost variance, quality score) with drill-down filtering by region and time period; wrote clean, documented Python modules with type hints and inline comments for maintainability

VOLUNTEER EXPERIENCE

Akshar Paul NGO, Pune — AI/ML Technical Volunteer

Jul – Nov 2025

- Completed 120+ accredited hours (Symbiosis International Deemed University, Faculty Dr. Shilpa Bade Gite); independently built a Python data pipeline for NGO resource allocation — versioned on GitHub with modular structure, README, and documentation aligned with open-source best practices

CERTIFICATIONS

SQL (Advanced) — HackerRank | ID: 8794F843CF79 (Dec 2024) • **SQL (Intermediate)** — HackerRank | Dec 2024 • **Python (Basic)** — HackerRank | Dec 2024

MongoDB Developer's Toolkit — GeeksforGeeks (2024) • **Google Analytics Certification** — Google | ID: 149235285 (exp. Jun 2026) • **Power BI** — MindLuster | Jun 2025

ACHIEVEMENTS

- HackerRank SQL Advanced (ID: 8794F843CF79) — top percentile among 140,000+ global candidates in complex query optimisation, window functions, and multi-table joins
- LeetCode (pankajyadav200) — 100+ problems solved (arrays, DP, graphs, SQL); GREEN Olympiad (GO4Youth) 2025 — Certificate of Distinction 80%+, Ministry of Education / TERI
